

MAINTENANCE MANAGEMENT WITH MAINSYS

Put software to work for serious savings. The MAINSYS software tool helps you implement state-of-the-art maintenance strategies and reduces the time required for planning and maintenance.

MAINSYS provides dynamic press maintenance control. Targeted, wear-dependent maintenance minimizes production failures and avoids unnecessary maintenance and expenditures.

MAINSYS also simplifies labor-intensive administrative tasks such as logistic and capacity planning, materials management, and the integration of different supplier maintenance specifications. The maintenance program achieves reliable workflows.

At the same time, it delivers important tools for data documentation and analysis, as well as cost controlling in the production chain.

YOUR ADVANTAGES

- Less administration: fast integration of different supplier maintenance specifications to specific operating conditions
- Integrated materials management: optimized storage and provision of spare parts
- Targeted maintenance minimizes production failures and avoids unnecessary maintenance, expenses, and production stops
- Work processes: optimized procedures, logistics, capacities, and materials management
- Production data at a glance with a variety of tools for analysis and documentation
