DYNAMIC INLINE CUTOFF CONTROL FOR COMMERCIAL PRESSES

ARE YOU AWARE OF ICCd? YOUR BOOSTER FOR PRODUCT QUALITY, WASTE REDUCTION AND A RECORD-BREAKING RETURN ON YOUR INVEST?

Thanks to a special, patented technology, it enables almost latency-free control of the cut-off register, especially through highly dynamic adjustments of the cut-off cylinder.

PRODUCT HIGHLIGHTS:

- Deterministic waste saving every reel change, blanket washing and start-up/press speed change
- Predictable and reliable waste savings up to 450 copies per hour
- Reduced consumption of consumables and energy
- Unique, patented product with unique performance

STRATEGIC BENEFITS:

- Save investment thanks to clear commitment of manroland Goss to the print industry and long term partnership
- Interesting pricing and financing models to enable necessary or reasonable investments in challenging times
- Realistic amortization time below 18 months possible

APPLICATIONS:

Optimum suitability especially for LITHOMAN III / LITHOMAN IV presses (manufactured since 1999)

- with drive system Masterdrive MotionControl
- with drive system DriveSys S

HOW DOES ICCd WORK?

REDUCE WASTE

COMMERCIAL PRESS

ENORMOUS POTENTIAL FOR WASTE SAVINGS

The following diagram shows the significant waste savings potential based on a running press line of one of our customers where the ICCd system has been successfully installed. In this case the printing press is a LITHOMAN with folder type over 48 pages.

Yearly savings up to 150k € on a LITHOMAN 1.700 x 1.240 mm

All figures given in this flyer are based on examples of real customer projects and depend on specific use cases. Specifications, features and dimensions are subject to availability along with change without prior notice.
