

New. Better. Lower prices.

Cutting optimization

- Currently, the cutting process can lead to dust accumulation or loop formation, for example. This results in higher wear and shorter service life.
- With our newly developed and improved cutting optimization you can prevent this!
Now available at MARKET-X.

Cutting Optimization

70.00015-6062 suitable for BT-folder.

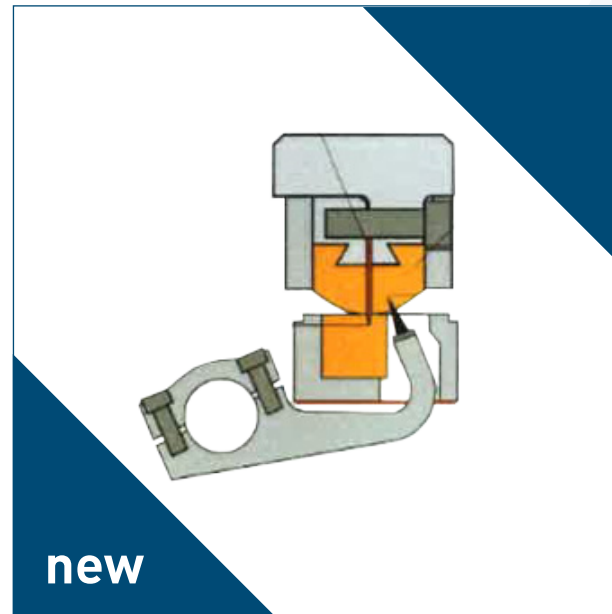

70.00015-6064 suitable for ROTOMAN-folder (2:3:3)

70.00015-6065 suitable for MT-folder.

Installation location: Folder

Through a rebuild with the use of raised groove bars and improved Vulkollan bars as well as fine cutting knives, we were able to optimize the the cutting process.

The use of high-quality components not only allows for a longer service life of the parts due to less wear. In addition, there is a qualitative improvement of the end product.

Benefits

- Higher cutting quality
- Less dust accumulation
- Less loop formation
- Higher quality by dot stitch
- Better web tension in front of cutting
- Longer service life of cutting knife, pins and cutting rubber bar

Better quality. Longer service life.

Do you see potential for improvement? We improve spare parts according to your wishes!

Customized. In quality. Price-wise.
